Overview

The Laptop Inventory system is a live multi-store inventory tool. Every laptop is tracked with its brand, model, specs, purchase cost, serial number and the store where it currently sits. When a laptop is **transferred** between stores or **sold**, the action is instantly visible to every user signed in — and every movement is recorded in history with **who performed it**.

Live by design. Inventory, sales, transfers and settings sync in real time. You never need to press refresh.

Never lose track. Every transfer and sale is stored permanently with date, time and the account that did it.

01 · Signing In

Step by step

1. Open the app URL in a browser. The sign-in screen appears.
2. Enter your **Username** (assigned to you by your manager or admin).
3. Enter your **Password** (at least 6 characters).
4. From the "**Which store are you at?**" dropdown, select the store you are signing in from. **This is required.**
5. Press **Sign In**.

Store-based sign-in

The store you pick at sign-in is recorded with every login. If your account has been restricted to specific stores, you will only be able to sign in from one of them:

Not allowed: If you pick a store that is not on your account's allowed list, sign-in is blocked and you will see *"This account is not allowed to sign in from this store."* No lapsing to another store — you must contact your admin to adjust your allowed stores.

Restriction-free: Accounts with an empty allowed-store list may sign in from any store.

Signing out & session restore

- Use the **Sign out** pill in the top-right of the header.
- If you close the browser and reopen it, the app remembers your session and connects automatically.
- If your password was reset by an admin, use the new password to sign in again.

Your login is tracked

Every successful sign-in is recorded (account, store, time, device). Admins can review this in **Accounts → Login Activity** or **Admin Settings → Login History**. Each entry shows whether you were at your home store (green), outside it (red), or if no home store is set (gray).

02 · The Dashboard

The dashboard is the home screen and the launchpad for the whole app. It is made of four interactive cards, each opening one module.

CARD	SHOWS	OPENS
01 · Inventory	Total laptops · "in stock / in transit"	Inventory list
02 · Transfer History	Number of recorded moves	Transfer history
03 · Sold	Units sold in total	Sales records
04 · Report	Laptops ready to sell right now	Reports & downloads

- Cards tilt in 3D when you move the mouse over them (no effect on phone).
- Counts update live as items are added, transferred or sold.
- Click the app **logo/title** in the header at any time to return to the dashboard.

The header bar

Left: logo + app title (clickable → dashboard).	Right: live status ("Live · synced"), your avatar, display name and role, plus the buttons you are permitted to use (Accounts, Settings, Brands, Vendors, Stores) and Sign out.
--	--

Your buttons = your permissions. Staff typically see the Dashboard and Sign out only. Admins see the management buttons. Buttons you are not permitted to use simply do not appear.

03 · Roles & Permissions

ROLE	WHO	WHAT THEY CAN DO
SUPER ADMIN	Owns the system	Everything: full permissions, every module, account management (all roles), settings, brands, vendors, customers, login history. Cannot be deleted or modified by anyone else.
ADMIN	Store managers / operators	Inventory (add/edit/delete/sell), transfers, create/edit/delete manager & staff accounts, rename stores, edit labels. Customers/vendors/brands only if the super admin grants them.
MANAGER	Team leads	Inventory, transfers, create/edit/delete staff accounts, rename stores. Cannot reset passwords or touch admin accounts.
STAFF	Viewers / sales staff	Browse inventory, transfer history, sales records, customers, reports. No edits by default — admin can grant more permissions in Settings.

Default permission matrix

PERMISSION	SUPER ADMIN	ADMIN	MANAGER	STAFF
Add / edit / remove laptops & sell	✓	✓	✓	—
Transfer laptops between stores	✓	✓	✓	—
Create / edit accounts	✓	✓	✓	—
Rename stores	✓	✓	✓	—
Edit buttons & labels	✓	✓	—	—
Manage vendors	✓	g	g	—
Manage customers	✓	g	g	—

g = not enabled by default; the super admin can switch it on per role in **Settings** → **Roles & Permissions**. The super admin always has access to everything.

Account limit: the system supports a maximum of **8 accounts** in total (including the super admin). The Accounts screen shows "X of 8 accounts" so you can always see how many slots remain.

04 · Inventory

The Inventory tab is where every laptop lives. Open it from the dashboard's **Inventory** card.

Filtering & searching

- **Sidebar:** "All Stores" plus one row per store, each with a live count. Click a store to see only its laptops.
- **Status dropdown:** All / In Stock / In Transit / Sold.
- **Search box:** type brand, model or serial number — the list narrows as you type. The counter shows how many laptops are displayed.

Table columns

COLUMN	MEANING
Brand/Model	Laptop identity (vendor is shown underneath, if recorded)
Specs	Storage (size/type) · processor · generation · graphics
Serial Number	Unique identifier of the machine
Current Store	Where the laptop is now ("Unassigned" if none)
Status	In Stock / In Transit / Sold chip
Purchase	₹ purchase rate + extra charges
Change Location	Transfer dropdown + Confirm Transfer (see §05)
Actions	Edit · Delete · Sell (per your permissions)

Adding a laptop

1. Press **Add Inventory**.
2. Fill the form: **Brand** (from the brands list), **Model**, Processor, Generation, Storage type & size, Purchased From (vendor), Graphics (Yes/No + type/model), **Purchase Rate ₹**, Extra Charges ₹, Location, Status (In Stock or In Transit).
3. **Serial number:** required for a single unit — unless the brand has a serial prefix set (then it is generated for you automatically).
4. Press **Save**. The laptop appears in the list instantly.

Bulk entry: in **Add** mode you can enter a **Quantity** (up to 1000). The system creates that many units and auto-generates serials for you — ideal for a new batch.

Sold is not an edit: you cannot set a laptop to "Sold" via the edit form — that status is final and only reachable through the **Sell** action (§06).

Editing & deleting

- **Edit** — update any field; changes appear live everywhere.
- **Delete** — asks for confirmation, then removes the laptop and its transfer history.
- A sold row expands to show who sold it: *"Sold for ₹X to {customer} on {date} by {username}"*.

05 · Transferring Laptops

Moving a laptop between stores takes two clicks — and the app records **who did it**, automatically.

Flow: Inventory row → "Change Location" dropdown → pick destination store → **Confirm Transfer** → instant update + toast "X moved to Store Y" + logged in Transfer History with your account name.

- 1. Open the **Inventory** tab.
- 2. In the row of the laptop, open **Change Location** and choose the destination store (the laptop's current store is not listed).
- 3. Press **Confirm Transfer**.
- 4. Watch the **Current Store** cell change immediately — every signed-in user sees it.

Who gets recorded?

The acting account is captured **server-side** and cannot be tampered with — even the super admin's transfers are shown with **superadmin** as the acting user. This makes the transfer history a trustworthy audit trail.

TRANSFERRED BY	MEANS
superadmin	The system owner performed the transfer
admin / manager / staff	The transfer was done by that account
—	Transfers recorded <i>before</i> this audit feature was enabled (no actor stored)

Where to verify: Transfer History tab, or download **Reports** → **Transfer History CSV** — both include the "Transferred By" column.

06 · Selling Laptops

1. In the inventory row, press **Sell** (available only on in-stock laptops).
2. **Sale Price ₹** is pre-filled at 1.2× the purchase rate. The cost is shown underneath so you can see your margin before confirming.
3. Optional: tick "**Customer purchases this**" and either pick an existing customer from the dropdown or fill the quick form (Name required; phone/email/address optional). A new customer is created and linked on the spot.
4. Press **Confirm Sale**.

What happens next

- A green toast confirms the sale with the amount.
- The laptop's status becomes **Sold** permanently and its row expands with the full sale summary.
- The sale appears in the **Sales** tab and in the downloadable reports.
- The selling account's username is recorded in the **Sold By** column.
- If a customer was linked, their entry in the **Customers** tab shows the purchase in their history.

Sold is final. There is no "unsell" button. A sold laptop is a permanent record — use the Edit action on the record if you need to correct details.

07 · Sales Records

The **Sales** tab is opened from the dashboard's **Sold** card. It shows only sold laptops — nothing else appears here.

- **Summary cards:** Units Sold · Total Sales ₹ · Total Profit ₹.
- **Sales table:** Laptop · Serial · Store · Customer · Sale Price · Cost · Profit (green when positive, red when negative) · Sold By · Sold At.
- **Download CSV** button exports the full sales register to `sales-report-YYYY-MM-DD.csv`.

08 · Transfer History

Every store-to-store movement, newest first (last 100 shown).

DATE / TIME	LAPTOP	SERIAL	FROM STORE	TO STORE	TRANSFERRED BY
12 Aug 2026 14:03	Dell Latitude 5420	DL-2341	Store A	Store B	superadmin
11 Aug 2026 09:47	HP ProBook 450 G9	HP-8812	Warehouse	Store A	aslam
...	...	...	...	...	...

- Summary cards at the top: **Total Transfers** and **Unique Laptops** moved.
- The **Transferred By** column shows the account that performed each transfer — including super admin actions.
- Older transfers made before the audit feature show "—" (their actor was not recorded).

09 · Customers

Customers are created automatically when you sell a laptop to a new buyer, or added manually here.

- **Add/Edit:** Name (required) · Phone · Email · Address · Notes.
- **Purchase history:** expand any customer to see every laptop they bought (Laptop, Serial, Store, Sale Price, Sold At).
- **Bulk delete:** tick the checkboxes of the customers to remove, then press Delete Selected.
- **Permissions:** customer management is only available to the super admin by default; admin needs this permission enabled in Settings.

10 · Reports & Downloads

Open from the dashboard's **Report** card. Four one-click CSV downloads — each file is named with the date it was generated.

DOWNLOAD	COLUMNS IN THE CSV	BEST FOR
Inventory Report	SKU · Brand · Model · Serial · Store · Status · Processor · Generation · Storage · Purchase Rate · Vendor · Created At	Stock sheets, audits
Sales Report	Sale ID · Laptop · Serial · Store · Customer · Sale Price · Cost · Profit · Sold By · Sold At	Accounts / tax records
Transfer History	# · Date/Time · Laptop · Serial · From Store · To Store · Transferred By	Movement audit — shows who moved what
Profit Summary	Units Sold · Total Sales ₹ · Total Profit ₹ · Generated At	Quick P&L overview

Built-in statistics

Below the downloads, the same screen shows live analytics: **Total Systems / In Stock / In Transit / Sold** cards, a **Systems by Brand** bar chart (stock vs transit vs sold per brand), a **By Generation** table and a **By Configuration** table.

Tip: CSVs open directly in Excel / Google Sheets. Combine your weekly Inventory Report + Sales Report + Profit Summary for a complete snapshot.

11 · Accounts & Login History

Open **Accounts** from the header (admins and managers). The panel shows "X of 8 accounts", a breakdown per role, a + **New Account** button, **Login Activity** (admin only) and bulk deletion with checkboxes.

Creating an account

1. Press **+ New Account**.
2. Fill: **Username** (3–32 chars, letters/numbers/dot/dash/underscore), **Display name**, **Password** (6+ chars).
3. Choose the **Role** — the options shown depend on your own role:
 - Manager can create: manager, staff
 - Admin can create: manager, staff
 - Super admin can create: any role, including admin and superadmin
4. Set **Home store** (their usual store — used for the login-status check) and **Allowed login stores** (tick the stores they may sign in from; leave empty for "any store").
5. Press **Create**.

Editing & deleting

- **Edit:** change display name, role, home store, allowed stores. Password fields left blank keep the existing password.
- **Password reset:** managers cannot reset passwords; that is reserved for the **super admin** (and admins for manager/staff accounts).
- **Delete:** never available for the super admin. A manager can only delete staff; an admin can delete manager & staff.
- **Bulk:** tick several accounts and press **Delete Selected**.

Login History

Find it in **Accounts** → **Login Activity** or **Admin Settings** → **Login History** (admin/superadmin).

COLUMN	MEANING
Account	Username that signed in
Store signed in	The store chosen at login
Home store	The account's configured home store
Status	At home store (green) · Outside home store (red) · No home store (gray)
Signed in	Date & time of the login

COLUMN	MEANING
IP	Device address (shown as "—" if not detected)

Use it for: spotting sign-ins from unexpected stores, verifying staff attendance, and confirming that store restrictions work.

12 · Admin Settings

Open **Settings** from the header. Four tabs, each behind the right permission.

Stores

- **Add Store** — create a new location/branch.
- **Rename** — rename any store (managers can rename too).
- **Remove** — delete a store (cannot be done while laptops are assigned to it).

Buttons & Labels

Every text in the app can be customized: app title, subtitle, filter labels, search placeholder, button texts ("Add Inventory", "Confirm Transfer", ...) and the history section titles. Changes broadcast to all signed-in users immediately.

Roles & Permissions

A toggle matrix of **7 permissions × 3 roles** (admin, manager, staff). The super admin always has everything. Typical change: give staff the ability to add laptops, or grant an admin the vendors module.

Login History

A shortcut to the same audit table described in §11.

13 · Brands & Vendors

Brands (header button — admin)

- Maintain the list of laptop brands used in the inventory picker.
- Each brand can have a **Serial prefix** — when set, new laptops of that brand have their serial numbers generated automatically.
- Add, rename and remove brands; removals are reflected everywhere the brand was offered.

Vendors (header button — requires the "manage vendors" permission)

- Keep a directory of suppliers: **Name + Contact**.
- Vendors appear in the laptop form under **Purchased From** (datalist autocomplete).
- Add, edit, delete — and bulk delete with checkboxes.

14 · Real-Time Updates

The app receives changes the moment they happen. The header pill shows **"Live · synced"** (green) or **"Reconnecting..."** if the connection blips — it recovers automatically.

SOMEONE...	YOU SEE
Adds a laptop	Toast: "In real time: {model} added to inventory" + row appears
Transfers a laptop	Toast: "{model} moved to {store}" + store cell updates
Sells a laptop	Toast: "{model} sold for ₹X" + status flips to Sold
Updates a laptop	Toast: "{model} updated"
Deletes a laptop	Toast: "a laptop was removed from inventory"
Renames a store / edits labels / changes permissions	Your list and labels refresh silently
Changes an account (profiles)	Toast: "Data refreshed" + everything reloads

Toasts appear near the bottom of the screen and auto-dismiss after a few seconds.

15 · Troubleshooting

PROBLEM	CAUSE / FIX
"This account is not allowed to sign in from this store."	Your allowed-store list doesn't include the selected store. Pick your assigned store — or ask an admin to add it in Accounts → Edit → Allowed login stores.
"Please select the store you are signing in from."	The store picker was left empty. Choose a store before signing in.
"Invalid login credentials"	Wrong username or password. Password needs 6+ characters; ask an admin to reset it if you've forgotten it.
"Account limit reached: maximum 8 accounts"	The system holds a maximum of 8 accounts. Delete an unused account first.
Add button or Sell button missing	Your role lacks that permission — ask your admin to enable it in Settings → Roles & Permissions.
Can't select "Sold" in the edit form	Correct behavior — Sold is only set via the Sell action, and it's final.
Transfer history shows "—" under Transferred By	The transfer was made before the audit feature existed. New transfers always record the account.
Login History shows "—" in IP	IP isn't captured by the browser; date, time, store and account are always recorded.
"Reconnecting..." in the header	Connection blip — the app reconnects itself. No action needed.
Super admin can't be deleted / edited by others	By design — the super admin account is protected.

Quick reference

Dashboard → home + 4 module cards.
Inventory → add, edit, delete, sell, transfer.
Sales → sold records + profit.

Transfers → movement audit with actor.
Reports → 4 CSV downloads + analytics.
Accounts/Settings → users, stores, labels, permissions.
